Know where your food comes from.

## Family Fun Times

Bonding and have fun.

## How to start a rice kit

**1 | SUN** the seeds under the sun for 1 day.

**2 | SOAK** the seeds in a small bowl of water for 1 day, keep it in the cupboard (or dark room)

**4 | Water the soil** and place box under SUNLIGHT

**3 | Plant** the sprouted seeds on the soil in the box

**5 | Transplant** seedlings to a B-I-G pot when 3-5 leaves appear. Roughly about 30cm diameter and height will suffice.

**6 | Most** compose or soil will do. Clayey soil is ideal though. Fertilise soil with crushed eggs shell or ground coffee.

**8 | Observe** the growth where pinnacles will start to form from flowers to padi seeds.

**7 | WATER DAILY** when the soil is dry. Ideally soil should be moist at all times. . It is NOT necessary for pot to be flooded.

**9 | When** seeds turn yellowish or brownish, its ready for harvest.

**10 | Cut** the entire plant near its roots and hang from the stem near the cut area to dry under the sun to a nice and dry golden brown.
